“Global Electric Motorcars, LLC (a division of DaimlerChrysler) adds the eTec LSV-100 Neighborhood Electric Vehicle Fast Charger to their vehicle Options List”

The Global Electric Motorcars (GEM), LLC, a division of DaimlerChrysler and the leader in Neighborhood Electric Vehicle (NEV) production has elected to offer the eTec LSV-100 NEV Fast Charger and the eTec LSV-2472 Convenience Charger as an optional feature to their GEM vehicle line-up.

GEM will be installing the optional charge receptacle kits on GEMs ordered with the fast charge option right at the factory. The overnight 110VAC charging capability remains on the vehicle and when customers order a GEM with the fast charge option along with an LSV-100, it will allow users to charge in minutes instead of hours.

eTec LSV-100

eTec LSV-2472

The eTec LSV-100 has a DC output of 100Amps, limited to 10kW total output power and can automatically charge 36VDC, 48VDC, 72VDC and 96VDC battery packs. The eTec LSV-2472 has a DC output of 24 Amps and a discrete output of 72VDC nominal output voltage. The eTec fast charge options for a new GEM vehicle can be ordered directly through GEM at www.gemcar.com. Additional information on the eTec fast charge products can be found at www.etecevs.com.
