

## eTec News

- January 2006 -

KeySpan awards eTec multi-year consulting services contract associated with Electric and Hybrid Vehicle Technologies.

KeySpan has awarded eTec, a leader in providing consulting services for electric and hybrid electric vehicles, a multi-year contract providing distributed generation support and engineering consulting services associated with Electric and Hybrid Vehicle Technologies to Long Island Power Authority (LIPA).

LIPA desires to understand the state of various advanced vehicle technologies that may impact their operations in the future. These analysis include understanding which advanced vehicle technologies are likely to enter the market and what infrastructure impacts may result in these vehicles deploying in LIPA's service territory.

The initial contract amount is valued at \$71,499 and the specific project scope will be defined with KeySpan Project Management staff in the first few months of the project period.
