“The ETEC Supercharge™ GSE-200DP selected by America West Airlines for Sacramento International Airport”

America West Airlines (AWA), through a competitive bid has awarded Electric Transportation Engineering Corporation (ETEC) the fast charge order for their electric ground support equipment that will be operated at Sacramento International Airport.

AWA has selected the ETEC SuperCharge™ GSE-200DP Dual Port, 15kW Universal Fast Charge System over the competition. A more cost-effective approach, the GSE-200DP allows opportunity fast charging throughout the day while providing the additional ports necessary to fully charge and equalize AWA's fleet in the evening. Another benefit to the GSE-200DP's over the competition is that they only require a 30Amp / 480V breaker and come complete, ready to install on the ramp and be put to use.

The GSE-200DP can charge any battery type, size and voltage (within 24VDC to 96VDC; higher voltages available by request) with an output of up to 200Amps, limited to 15kW.
